Finchb at a glance

Finchb is a wallet for the Solana blockchain that runs on the web, as an installable app on phones and computers, and inside Telegram. A new wallet is created with one tap and without an email address. Finchb is based in Singapore. More information is available at www.finchb.com.

Name	Finchb, written with a small b
What it is	A wallet for the Solana blockchain, with optional modules on the same account
Where it runs	In the browser, as an installable app on phones and computers without an app store, and inside Telegram as a Mini App and a bot
Live since	1 October 2026 on the Solana mainnet; in Telegram since 2 October 2026
Blockchain	Solana; TON is planned, without a date
Assets	SOL, USDC and other Solana tokens, including memecoins and Token-2022 tokens
Account	Created with one tap, no email address needed; 12 recovery words as the backup; email, password and two-factor sign-in optional
Ways to top up	The wallet address, crypto from other networks such as USDT, BTC, ETH or TON that arrives as USDC on Solana, or a card through outside providers
Modules	Solana Bird, Meme Radar, Grid Bot, Swap, Pay with other crypto, Buy
Languages	Nine, among them English, German, French, Spanish, Italian, Romanian, Russian and Arabic
Transparency	Every payout of the products is public on transactions.finchb.com, each with a Solscan link
Support	In the chat, in the wallet and in the Telegram bot
Based in	Singapore
Email for the press	mail@finchb.com
Address	12 Marina Boulevard, Singapore 018982

What Finchb offers

The Finchb wallet

Send and receive SOL, USDC and other Solana tokens, including memecoins and Token-2022 tokens, with a clear confirmation before every payment. A wallet is created with one tap; 12 recovery words are its backup, and email, password and two-factor sign-in can be added at any time. An existing Solana wallet can be imported with its recovery words and keeps its address.

Finchb in Telegram

The full wallet opens as a Mini App next to the chat, and the Finchb bot controls it with buttons: it shows the balance, sends SOL and USDC, swaps SOL into USDC and announces every incoming payment. With “Log in with Telegram” on the website, one Telegram account is one Finchb account wherever it started.

Swap and Pay with other crypto

Swap moves funds between SOL and USDC inside the wallet; a quote shows what is sent and what arrives before “Confirm swap”. “Pay with other crypto” accepts the coin a user already holds, such as USDT, BTC, ETH or TON, and delivers it as USDC on Solana, with the network named on every screen.

Buy

SOL and USDC can be bought by card through outside providers that the wallet links to. The wallet shows the way to them from its top-up screen, next to the wallet address and Pay with other crypto.

Solana Bird

A game inside the wallet: a small bird flies through a course drawn from real SOL price candles, and a pot fills with USDC or SOL during the flight. Collected amounts go to the game balance and from there to the Finchb wallet. The first level needs no deposit; from the next level on, the bird flies by itself around the clock.

Meme Radar

A module with packages in SOL or USDC: a radar follows new memecoins on Solana. The term and the amount paid out at the end are set when a package is bought and shown before confirming. At the end of the term, Finchb pays the package out to the wallet by itself, and a countdown shows the time left.

Grid Bot

A bot that lays a grid of price lines over the SOL price, buys at the lower lines and sells at the upper ones. The balance grows every second, live on the screen, at a daily rate that Finchb sets and shows before the deposit. SOL can be taken out at any time; the fees are shown before confirming.

Payouts in public

Every payout of the Finchb products is listed live on transactions.finchb.com, each with a link to the Solscan block explorer, so anyone can check that a payment really left for a wallet on the blockchain.

Support and community

Support answers in the chat, both in the wallet and in the Telegram bot. The Finchb community meets in its group on Telegram, and the news channel carries every announcement.

Milestones

October 28, 2026 Finchb pays the network fee when a customer moves USDC into Solana Bird or Meme Radar from a wallet that holds no SOL yet.

October 26, 2026 Business Insider carries the story of the Finchb wallet on the web, on phones and in Telegram.

October 20, 2026 A guide on www.finchb.com compares Solana wallets, with a source for every fact.

October 19, 2026 Five more languages join, among them Arabic, Russian, Romanian and Italian, for nine in all. Pay with other crypto opens each coin with a preview first.

October 18, 2026 The wallet, the Mini App and the bot speak French and Spanish, and support answers right in the Telegram chat.

October 14, 2026 The first article about Finchb appears, on TechBullion.

October 2, 2026 Finchb opens in Telegram: the wallet as a Mini App and the Finchb bot in the chat.

October 1, 2026 Finchb goes live on the Solana mainnet, in the browser and as an installable app.
